Boost in AdBlue supplies

The Australian Logistics Council (ALC) has welcomed news that AdBlue supplies have been boosted by local production increases.

ALC CEO Brad Williams said the ramp-up of local production, ongoing imports and strategic distribution of available supplies has given businesses confidence that the AdBlue situation has stabilised and stocks are gradually starting to increase.

“While we’re not back to normal just yet, the collaborative effort between the Australian Government and industry has eased the supply pressures on AdBlue and should give users confidence the situation is manageable moving forward, Mr Williams said.

Inctec Pivot achieved a production milestone of 3 million litres of AdBlue last week which is currently being distributed to wholesalers and fuel outlets.
